April 25.2018

Artificial intelligence is include a wide range of science, it is composed of different fields,such as machine learning,computer vision,etc,on the whole,the research on artificial intelligence is one of the main goals of the machine can do some usually need to perform complex human intelligence. Artificial intelligence research include:knowledge representation,automatic reasoning and research method,machine learning and knowledge acquisition and processing of knowledge system,natural language processing,computer vision,intelligent robot,automatic program design,etc.
